Card Services and Credit Card Policy

Apex Bank Demo | Card Servicing | Document ID: CARD-POL-001 | Version 1.0 | Effective for demo: 24 October 2026

DEMO DOCUMENT ONLY - This policy is fictional content created for a software demonstration and RAG testing. It is not an actual bank policy, legal advice, or a statement of current RBI, NPCI, card-network, or lender rules. Do not use these values for real financial decisions or production banking.

Document status	Version	Applies to
Fictional / demo only	1.0	Test chatbot and RAG retrieval only

1. Purpose and scope

This document defines fictional card-service rules for chatbot demonstration. It covers lost cards, replacement, contactless payments, billing statements, payment dues, and card-related disputes. All amounts and timeframes in this document are mock values created for testing.

The assistant must retrieve a customer's actual card status, available limit, statement balance, minimum due, and due date from the authorized card system. This document does not contain live cardholder records.

2. Lost, stolen, or compromised card

A customer who reports a lost, stolen, or compromised card should be guided to lock or block the correct card as quickly as the bank's approved workflow permits. Verify customer identity and card ownership before executing the action.

The confirmation screen should identify the masked card and card type. The server must bind the pending action to the authenticated customer and the selected card. Do not trust a card ID, customer ID, or action payload merely because it was sent by the frontend.

After a block request, report success only after the card system confirms the status change. If the request is pending or fails, state the actual outcome. A repeated confirmation must not cause a second, inconsistent action.

3. Card replacement - demo rule

For this demo policy, a replacement debit card has a service fee of INR 150 plus applicable GST. The fee may be waived only when an explicit waiver flag or approved waiver record is returned by the servicing system; the chatbot must not assume that a waiver applies.

The illustrative delivery estimate is 3 to 5 business days after the replacement request is accepted. This is an estimate, not a guarantee. The assistant should disclose the estimate and any actual dispatch status returned by the card system.

The customer should review the card type, masked card identifier, delivery address on file, fee, and confirmation summary before submitting a replacement request. Do not expose a full card number or CVV in chat.

4. Contactless payments - demo rule

For this fictional demo policy, contactless card payments of up to INR 5,000 per transaction may be approved without entering a PIN, subject to card configuration, merchant terminal capability, risk checks, and any issuer controls.

For a contactless transaction above INR 5,000, the terminal should request cardholder verification such as a PIN or another method required by the payment flow. The limit is a demo value only and must not be represented as a current real-world network rule.

A contactless limit is not the same as a daily spending limit, credit limit, available balance, or available credit. Those values must be retrieved from the relevant authorized system.

5. Credit card statement, minimum due, and late fee - demo rule

The statement due date, total amount due, minimum amount due, and available credit must be taken from the customer's current statement or the approved card system. If the statement is unavailable, the assistant must not calculate or invent a due date.

For testing this demo policy, the illustrative late-payment fee is INR 750 if the required minimum amount is not received by the payment deadline. Any applicable tax, waiver, fee tier, grace period, or other condition must be verified against the actual statement and servicing configuration before presenting a customer-specific amount.

Paying only the minimum amount due may leave an outstanding balance and may result in interest according to the customer's card agreement. The chatbot should not claim that paying the minimum clears the full statement balance.

6. Disputes and card security

A customer who does not recognize a card transaction should be helped to locate the exact transaction. Verify customer ownership and display the merchant, date, amount, and reference number returned by the system.

Opening a dispute does not by itself confirm fraud, guarantee a refund, or establish eligibility for provisional credit. Those outcomes require their own processing and status confirmation.

Never ask the customer to share a PIN, CVV, complete card number, password, or one-time passcode in the conversation. Mask card identifiers in displays and logs.

7. Frequently asked questions

Q: What is the demo debit-card replacement fee?
A: INR 150 plus applicable GST, subject to an approved waiver if the servicing system confirms one.

Q: How long does replacement delivery take?
A: The illustrative estimate is 3 to 5 business days after acceptance; actual dispatch information takes precedence.

Q: What contactless amount is allowed without a PIN under this demo policy?
A: Up to INR 5,000 per transaction, subject to issuer and terminal controls.

Q: What is the illustrative late fee in this demo policy?
A: INR 750 when the minimum amount due is not received by the payment deadline, subject to applicable conditions.

Q: Can the assistant confirm a block before the card system updates?
A: No. It must report the confirmed outcome returned by the card system.

Implementation note: The assistant must prioritize authenticated, customer-specific system data for account facts and actions. Use this document only to answer general policy questions, and identify it as demo policy if asked about its source.
